

ISO9001 FM38198

FITTING INSTRUCTION

VW5069

Batch 000000

VW Golf VII & Audi A3 (From 2012), Audi A3 Sportback & Seat Leon (From 2013)

Type Approval Number E11 55R-01 10142

COMPONENTS

ITEM	QTY	DESCRIPTION
A	1	Towbar
B	1	Swan Neck (ZC1503)
B1	2	3mm Spacers
C	2	Side Arms
EP	1	Electrical Mounting Bracket (ZM1390)

BOLT PACK

ITEM	QTY	DESCRIPTION
E	2	M12 x 70 Bolts & Nyloc Nuts
F	4	M12 x 40 Bolts, Nuts & Washers
G	4	M10 x 40 Bolts & Washers
H	4	M10 H/D Washer – 30mm O/D x 5mm Thick

FITTING PROCEDURE

⇒ All models: Release rear light clusters by removing the large plastic nut on the rear of each, accessed through trim panel in boot area. Pull rearward and disconnect the wiring harness.

⇒ Remove bumper:

Volkswagen Golf: On the underside: 4x plastic push-in plugs, 1x torx screw securing edge of each wheelarch liner to bumper. Continue by removing 3x torx screws around the perimeter of each wheelarch, and an additional torx screw at each bumper tip. Pull bumper tips outboard to release from clips along bumper-body edge, prior to pulling rearward to release from clips along rear panel. Disconnect plugs for lighting & reversing sensor functions.

Audi A3 & A3 Sportback: Release plastic peg in each light cluster area. 3x torx screws around the perimeter of each wheelarch, 2x torx screws on the lower edge of bumper. From inside the vehicle remove the plastic trim on the rear panel; locate & remove the 4x rubber grommets and corresponding 10mm nuts (Long socket required!). Pull bumper tips outboard to release from clips along bumper-body edge, prior to pulling rearward to release from clips along rear panel. If fitted, disconnect plug for reversing sensors.

Seat Leon: Remove 2x screws in each light cluster area. On the underside: 2x torx screws, 2x torx screw securing edge of each wheelarch liner to bumper. Continue by removing 3x torx screws around the perimeter of each wheelarch, and an additional torx screw at each bumper tip. Pull bumper tips outboard to release from clips along bumper-body edge, prior to pulling rearward to release from clips along rear panel. Disconnect plugs for lighting & reversing sensor functions.

⇒ Remove bumper impact beam (Hand beam to vehicle operator for retention). Important: Replace mounting bolts into rear panel to prevent water ingress. On Seat Leon, make an incision centrally in the plastic rear panel as illustrated.

⇒ Locate the 2 existing mounting holes in the outside wall of each chassis rail. Remove any covering tape and underseal that will prevent correct seating of washers (H). Insert side arms (C) into open ends of vehicle chassis and loosely attach using bolts (G) with heavy duty washers (H) under the bolt heads, in the correct position in relation to vehicle type.

⇒ Insert towbar (A) between side arms (C) and loosely attach using bolts (F). Ensuring all components are square & level, fully tighten all bolts.

⇒ Make an incision in the bumper as illustrated according to vehicle type. Refit bumper & light clusters.

⇒ Attach swan neck (B) & electrical mounting bracket (EP) to towbar (A) using bolts (E) with 1 spacer (B1) at each side of the swan neck. Ensure (EP) is positioned in the highest-most position possible and angle if required. **The electrical mounting bracket carries type approval information required by law and must always be fitted as shown.** Tighten bolts ensuring the towball remains vertical and square to the vehicle.

TIGHTEN ALL BOLTS

TORQUE SETTINGS ISO Coarse Pitch M8 = 29Nm, M10 = 58Nm, M12 = 102Nm, M16 = 252Nm
ISO Fine Pitch M8 = 31Nm, M10 = 61Nm, M12 = 111Nm

THE VEHICLE MANUFACTURER'S SPECIFICATION FOR THE TRAILER WEIGHT AND NOSE LOAD LIMITS MUST BE OBSERVED.

IMPORTANT PRODUCT INFORMATION & GUARANTEE

(TO BE RETAINED WITH THE VEHICLE AND PASSED TO SUBSEQUENT OWNERS)

Thank you for purchasing a PCT Automotive product. Please read the following information carefully before fitting or using your PCT Automotive product.

GUARANTEE

We shall free of charge either repair or at our option replace defective goods where the defects appear

- i. if the goods are a towbar manufactured by us, during the economic lifetime of the vehicle it was first fitted to
- ii. in the case of all other products manufactured by us, within 3 years following the date of your order

PROVIDED THAT (in each case) such defects shall be found to our reasonable satisfaction to have arisen substantially from our faulty design, workmanship or materials and have not arisen by reason of a failure to follow our instructions (whether written or oral), any modification, misuse, neglect or interference with the installation, any damage or abuse to the goods or vehicle by impact or vandalism or by a failure to carry out reasonable inspection, maintenance and/or adjustment.

At all times, the above guarantee is subject to our standard terms and conditions of sale a copy of which is available upon request from our offices.

TOWING LIMITS

Our towbars have been designed for towing up to the vehicle manufacturer's maximum recommended trailer weight and nose load limits for your model. Towing with gross weights above that recommended at any time will invalidate the guarantee and cancel any liability for damage. Towing a twin axle trailer, towing over rough ground or using a bicycle/motorcycle carrier, etc, exerts extreme loads on to a towbar and extra care should be taken in these situations not to exceed the vehicle manufacturer's maximum recommended limits.

PRODUCT IDENTIFICATION MARK

Your product carries a product identification mark. This mark carries important product and batch code information and if the product is type approved it also carries the type approval details which are required by law. Under no circumstances should this mark be defaced, removed or damaged.

INSTALLATION, INSPECTION, MAINTENANCE AND ADJUSTMENT

GENERAL INSTALLATION

- ⇒ All products should only be fitted by competent persons. Electrical products must only be fitted by an experienced auto-electrician.
- ⇒ Read the product fitting instructions carefully and check all components are included in the fitting kit before commencing installation.
- ⇒ Check vehicle for corrosion and/or accident damage. Towbars should not be fitted to any vehicle suffering from corrosion or accident damage or which is not in a roadworthy condition.
- ⇒ Clean off all road dirt, underseal and sound deadening mastic where parts are to fit to ensure correct seating of all components.
- ⇒ Bumper cut information is given as a guide only. Variations in models may occur therefore the fitter should always check that the bumper cut is necessary and of the correct size and shape before commencing with the cut.
- ⇒ All drilling swarf should be removed from the vehicle and all holes drilled in the vehicle should be treated with an appropriate rust inhibitor.
- ⇒ Do not fully tighten bolts before towbar is completely fitted unless instructed to do so in the fitting instruction, this will allow some variances to be overcome before final tightening of bolts.

PAINT & CORROSION

Towbars manufactured by PCT Automotive undergo a phosphate chemical pre-treatment prior to a polyester powder coat finish being applied. For long lasting good looks and in order to prevent corrosion the towbar should be regularly inspected for paint damage and wherever necessary re-painted in an appropriate finishing paint or underseal. The vehicle should also be regularly checked for any corrosion that could affect the towbar installation. Towbars should not be used on any vehicle suffering from corrosion that could affect the towbar installation.

BOLTS

All towbar fixing bolts should be checked initially after the first 300 towing miles, or the initial 500 miles of driving uncoupled, and then every 3,000 towing miles or to coincide with the vehicle manufacturer's recommended service intervals, whichever is the sooner. All towbar fixing bolts should be tightened using an appropriate torque wrench to the settings specified in the towbar fitting instruction.

ELECTRICAL INSTALLATION, TEST/COMMISSIONING AND MAINTENANCE

Failure to comply with the following instructions may cause damage to the towing vehicle's wiring loom and/or towing electrics installation.

Where displacement tap connectors e.g. Scotchlocks, are the preferred method of connection, always use the correct colour coded tap connector for the size of cable to which it is to be connected. All towing relays and modules manufactured by PCT Automotive have cabling with a copper cross-sectional area in the range 0.5mm² to 1mm².

After installation of the 12N/12S sockets, prior to testing, a water displacement agent e.g. WD40 should be applied into the rear connection void through the water drain hole at the bottom of the sockets and also into the front pins under the socket flap. This socket maintenance should be carried out at least twice a year in the spring and autumn.

The towing electrics test procedure must be undertaken with the engine running. If any of the towing relays fail to function correctly, with the engine running and no other vehicle electrical systems turned on, check that the voltage across the vehicle's battery is between 13V and 14V approx, if this voltage is not correct, check the condition of the vehicle's battery/alternator.

Always ensure that the trailer/caravan/lighting board's own electrical systems are installed and functioning correctly before coupling to the vehicle's 12N/12S sockets.

Every six months (spring and autumn recommended) the battery and alternator of the vehicle should be checked to determine correct electrical functioning. All connections of the electrical installation including the earth should be checked for mechanical soundness and electrical quality. Plugs, sockets, relays and fixings should be checked for water ingress, mechanical soundness, electrical quality and general wear and tear.

Please complete the following information to validate the guarantee and for future reference.
